LAB - 01 24/09/24

1. Tic Tac Toe (User vls Computer)

→ Algorithm:

Step 1: Randomize who starts first.
if ~~comp:them~~ Computer then
randomize first move. & assign ← X.
else
user picks a space to mark ← X.

Step 2: Second player get 'O'.

Step 3: Construct a play mat of 3x3 matrix (9 spaces)

Step 4: First player (depending on user or computer) marks a space onthe board.

Step 5: Every turn alternatively switches until one player gets a horizontal, diagonal or verticle rows/columns filled with the same symbol X || Y.

Step 6: Conditions in a tic tac toe that can occur to determine best move:
i) Get three in a row - Win
ii) Block an almost complete sequence - Block
iii) Opportunity to win in two ways - Twin win

Step 7: The game ends when either of the player wins or all the empty spaces are filled resulting in a Tie.

Code:-

~~import random~~

~~def print_board(board):~~
~~""" Print the Tic-Tac-Toe~~
~~row1 = None~~

```
import random

def print_board(board):
    for row in board:
        print(" | ".join(row))
        print("-" * 9)
